

ABSTRACT OF THE DISCLOSURE

A method and apparatus for presenting video data recorded on a recording medium in synchronization with text-based data is disclosed. The video data recorded on the recording medium is reproduced and presented based on video presentation reference time synchronized with program clock reference (PCR) included in the video data and the text-based data is presented based on text presentation reference time. If the presentation position of the video data changes discontinuously, the text presentation reference time as well as the video presentation reference time is adjusted accordingly.
